The findings of the independent review are as follows:

Questions for Review

Medical necessity of anterior posterior Lumbar fusion L3-4 with ICBG and instrumentation with 4 day inpatient stay, TLSO brace, CPT 22612 and L0486

Determination

PHMO, Inc. has performed an independent review of the proposed care to determine if the adverse determination was appropriate. After review of all medical records received from both parties involved, the PHMO, Inc. physician reviewer has determined to **uphold the denial** on the requested service(s).

Summary of Clinical History

The patient sustained an injury on ___, while on the job with .

Clinical Rationale

This patient has a three level lumbar disc degeneration. There was a full thickness annular tear at L4-5 with a left paracentral disc protrusion. The L5-S1 level had marked degenerative disc disease. Thus, morphologically, the lower three discs are abnormal. Building a fusion at L3-4 on these abnormal other discs would be unlikely to provide the patient any significant long term benefit and would likely accelerate the L4-5 disc breakdown. There is no documented spine instability. Thus, this request is not validated as a medical necessity. In conclusion, uphold the denial.
