Determination

After review of all medical records received from both parties involved, the PHMO, Inc. physician reviewer has determined to **overturn the denial** on the requested service(s).

Summary of Clinical History

The patient sustained a work related on the job injury on ___, while employed with

.

Clinical Rationale

The records reflect that this individual was injured on the job and has had 4 years of retractable pain and a cervical decompressive surgery and fusion. He has had trigger point injections with 70% relief of pain that is only short lived. It is certainly accepted that Botox hemodynamics denervation lasts for 6 months or longer and can have progressive effects.

Given the fact that this person has failed improvement with conservative measures and surgical procedures and continues to have significant pain and medication usage, it is felt that this treatment is reasonable and necessary and could reduce pain and reduce medication usage.
