Questions for Review

Determination

PHMO, Inc. has performed an independent review of the proposed care to determine if the adverse determination was appropriate. After review of all medical records received from both parties involved, the PHMO, Inc. physician reviewer has determined to **overturn the denial** on the requested service(s).

Summary of Clinical History

Ms. ___ sustained a work related on the job injury on ___, while employed with
.

Clinical Rationale

The surgeon has stated that the patient has tried and failed conservative care, including anti-inflammatory medication and a home exercise program. The date of injury was ___. There is a hand written documentation supporting an exercise program. Steroid injections are frequently short-lived. Steroid

injections to arthritic joints are rarely curative. The patient is tender at the acromioclavicular joint. Excision of the distal clavicle along with an arthroscopy to further evaluate the shoulder is an acceptable orthopaedic treatment option. Other treatments would be indicated pending a diagnostic evaluation with the arthroscopy. This is an acceptable approach as noted in Campbell's Operative Orthopaedics.
