

Texas Automobile Insurance Plan Association
2018 Private Passenger Auto and Commercial Vehicle Rate Filing
Explanatory Memorandum

Introduction

TAIPA is proposing an estimated overall average rate level change of +4.8% for private passenger cars. The average increase is generated by changes in the base rates for each territory. No changes are proposed in the current territory rate factors or class rate factors.

TAIPA is also proposing changes in base rates for commercial vehicles that will generate an estimated overall change of +3.9% in commercial vehicle premiums. No changes in any rate factors for commercial vehicles are being proposed in this filing.

Historical Perspective

In 2004, over 12,000 private passenger cars were being insured through TAIPA. The following Table 1 presents the number of Texas assigned risks reported for 2013 through 2016. For the latest four years, TAIPA's insured exposure counts have remained low and relatively stable from year to year.

The 2016 exposure counts are the latest available statistical data. The private passenger counts are reported in the Texas QDE Report. The commercial vehicle exposure counts are provided by the ISO. The exposure counts in Table 1 are earned car years (i.e., the equivalent of one vehicle insured for 12 months) for the BI Liability coverage.

Table 1: TAIPA Bodily Injury Exposure Counts

<u>Type of Vehicle</u>	<i>BI Liability Earned Car Years</i>			
	<u>2013</u>	<u>2014</u>	<u>2015</u>	<u>2016</u>
Private Passenger Autos	1,041	1,459	1,145	1,007
Non-Zone Rated:				
Trucks, Tractors, Trailers	291	291	350	300
Taxis, Limousines	152	180	228	190
School, Church Buses	116	91	101	83
Other Buses	37	65	121	108
Van Pools	0	0	0	1
Zone Rated:				
Trucks	0	0	0	0
Public Autos	0	0	0	0

The exposure counts for the PD Liability coverage are nearly identical to the BI Liability exposure counts shown in Table 1 for all types of vehicles. The exposure counts for the private passenger Personal Injury Protection and Uninsured Motorist coverages are significantly less than the BIPD Liability exposure counts. For example, in 2016 there were only 61 PIP earned cars for TAIPA, 150 UMBI earned cars, and 149 UMPD earned cars.

The relatively low count of TAIPA insured vehicles suggests that the voluntary competitive market is serving the vast majority of vehicle insureds in Texas and that TAIPA is functioning as the legislature originally intended, as the insurer-of-last-resort. While a low count of insureds is desired for TAIPA, the low count does create challenges to traditional ratemaking procedures. The low count of insured vehicles means there are not enough historical losses to provide a credible database of assigned risk claim losses necessary to apply traditional actuarial ratemaking procedures.

TAIPA's Ratemaking Procedures

A decade ago when TAIPA had a much larger claim loss database, it used a classical actuarial ratemaking procedure that involved adjusting past premiums to the present rate level and the projection of past losses and expenses to future cost levels. When TAIPA's actuarially determined rate change indications were deemed to be less than 100% credible, the TDI required that the complement of the credibility be applied to the Texas one-year trend in claim losses. In other words, when the traditional actuarial ratemaking procedures were applied to TAIPA data with zero credibility, the resulting indicated rate change was set equal to the historical trend in claim losses.

Due to the low count of TAIPA insured vehicles and the lack of any actuarial credibility in TAIPA's claim loss data, it became apparent in 2015 to TAIPA and the TDI that there was a need to simplify TAIPA's past ratemaking procedures. TAIPA refers to the new ratemaking procedure as "indexing" to the historical annual change in industrywide Texas loss costs. The procedure could also be described as tracking the annual trend in claim losses, exactly the same procedure used by actuaries when the sophisticated actuarial rate change indications are deemed to have no actuarial credibility.

It is important to note that TAIPA is not projecting future loss trends. TAIPA is monitoring various historical measures of how loss costs have actually changed in the past year and then adjusting its rates so as to track those historical changes. These actual historical changes in loss costs are commonly referred to as "loss trends" and are shown in the attached Exhibit VI.

In addition to monitoring the annual historical loss trends in the Texas voluntary private passenger insurance market, TAIPA is also tracking the annual change in the 3-year average loss costs for the Texas voluntary market. The 3-year average loss costs used are the reported incurred losses for the three latest available accident-years, unadjusted for estimated future loss development and unadjusted for estimated future trends. If the annual change in the voluntary market's actual historical loss costs remains relatively constant from year-to-year, TAIPA's overall average rate level for each coverage will approximately track the trend in the Texas industrywide loss costs for each coverage. In other words, TAIPA's rates will lag by one year the actual loss cost changes, rather than anticipate future changes.

Reliance on the Texas industrywide voluntary loss cost data minimizes the possibility that there will be large swings in the magnitude of future TAIPA rate changes. If the industrywide data is distorted by an unexpected anomaly in the data, or if economic conditions change so as to significantly accelerate Texas loss trends, then TAIPA's actuary will need to adjust the proposed rate changes. But if economic conditions remain relatively constant into the future, TAIPA expects its future annual rate changes to be in the range of 0% to 5%.

This rate filing is the fourth rate filing that TAIPA has used this indexing method of ratemaking. This will be the fourth filing since 2015 that TAIPA's proposed overall rate change has been less than 5%.

Proposed Private Passenger Rates

Rate Level Changes

The following Table 2 summarizes the changes in private passenger loss costs in Texas which TAIPA considered in selecting its proposed private passenger rate level changes.

Table 2: Private Passenger Loss Cost Changes

(1)	(2)	(3)	(4)	(5)	(6)
3-Year Loss Cost Change					
Coverage	Actual	Adjusted	1-Year Paid P.P. Change	3-Year Linear Trend	Proposed Rate Level Change
BI Liability	+8.4%	+8.2%	+9.7%	+9.7%	+5.0%
PD Liability	+6.5%	+6.4%	+5.7%	+7.6%	+4.8%
PIP	+2.1%	+1.6%	+2.2%	+3.8%	+2.4%
UM-BI	+13.3%	+12.0%	+11.4%	+13.8%	+4.5%
UM-PD	+5.6%	+5.6%	+2.7%	+6.6%	+4.5%

The “3-Year Loss Cost Change” in Column (2) is a comparison of the voluntary market’s actual loss costs for 2013-2015 to the latest available industrywide loss costs for 2014-2016.

The “3-Year Loss Cost Change” in Column (3) is a comparison of the average 2013-2015 loss costs to the average 2014-2016 loss costs for the voluntary market, with the statewide average loss cost calculated using TAIPA’s 2016 distribution of earned cars by territory. This calculation recognizes that TAIPA’s distribution business by territory is different than the distribution of the voluntary market. This calculation also normalizes the loss cost change to remove the effect of TAIPA’s year-to-year distribution shift by territory.

The “1-Year Paid Pure Premium Change” in Column (4) is the actual change in the voluntary market’s 2016 paid pure premium as compared to the 2015 pure premium. These data are presented in the loss trend charts attached as Exhibit VI and were derived from data in the QDE Report.

The “3-Year Linear Trend” in Column (5) is the average actual change, as measured by linear regression, in the paid pure premium quarterly data for 2014 through 2016, as shown in the attached Exhibit VI.

Rate Factor Changes

For many years TAIPA used the old “Texas Benchmark” territory and class rate factors. After Texas abandoned the benchmark rating approach, it was the TDI’s preference that TAIPA continue to use the old benchmark rate factors for private passenger autos. Over the years, TAIPA’s private passenger rate factors became increasingly out-of-step with the rate factors generally used in the voluntary private passenger auto insurance market.

Beginning with its 2015 rate filing, TAIPA has been introducing incremental changes to its territory and class rate factors in an effort to make its rate factors more consistent with industrywide Texas loss cost data and more consistent with the rate factors used by voluntary insurers in Texas. After three successive rate filings which incorporated territory and class rate factor changes, we find that the latest available loss cost data indicate that no further changes in rate factors are necessary with this rate filing. We will continue to monitor the voluntary loss cost data and propose appropriate changes to the territory and class rate factors in future rate filings.

The following Table 3 summarizes the premium effect of the proposed rate factor changes and the base rate changes.

Commercial Vehicle Rates

History

The history of TAIPA's commercial vehicle rates differs from the history of TAIPA's private passenger auto rates in two important respects.

Prior to its 2015 rate filing, TAIPA's commercial vehicle rates were derived directly from the voluntary market loss costs filed in Texas by the ISO. No adjustment was made for the higher than average risk insured through TAIPA. Unlike its private passenger rates, TAIPA's commercial vehicle rates have been set for the past several years based on the average commercial risk in the voluntary market. Although intended to be the insurer-of-last-resort, TAIPA's commercial rates are in competition with voluntary insurers for commercial vehicle insureds.

TAIPA's desire is to gradually increase its commercial vehicle rate levels so as to be nearer the high-end of the range of rates in the voluntary market, rather than being nearer the middle of the range. To accomplish the adjustment in the commercial rate level will require a series of rate increases that are greater than the current annual loss trends.

The second distinction from the private passenger rates has to do with rate factors. As previously discussed, the private passenger rate factors were tied for many years to the "old benchmark" factors and were in need of being updated. Such is not the case for the commercial vehicle rate factors. Because its rates were based on industry loss costs filed by the ISO, TAIPA's commercial vehicle rate factors are generally consistent with the rate factors being used in the Texas voluntary market. Modest changes were made to the territory rate factors in TAIPA's 2015 and 2016 rate filings, but there is no apparent need for further rate factor changes at this time.

Proposed Rate Changes

With this filing TAIPA is proposing only base rate changes, with no changes to any commercial territory or class rate factors. The base rate changes are set forth in Exhibits VII through XVII and are summarized in the following Table 4.

The basis for the proposed base rate changes is an analysis of the annual change in the 3-year average voluntary market loss costs, modified by both TAIPA's desire to gradually move its commercial vehicle rates above the industry average rate level in the voluntary market and by TAIPA's desire to avoid the random fluctuations in the voluntary commercial loss cost data. In this filing there are instances where the loss costs have decreased, but TAIPA is proposing no rate change so as to avoid becoming even more competitive with the voluntary market. It should be noted that the largest percentage rate change results from a minimal \$1 increase in the PIP base rate for school buses.

Due to a relatively low count of commercial vehicles in the voluntary market, as compared to the count of private passenger vehicles, the commercial 3-year average loss costs exhibit significant changes due to factors other than the underlying annual loss trend. We have attempted to remove some of these outside influences by normalizing the 3-year loss costs for shifts in the distribution of insured vehicles by territory and for changes from year to year in the insurers reporting commercial data to the ISO.

The “adjusted” loss cost changes in Table 4 reflect the removal of the effect of changes in the voluntary distribution of commercial vehicles by territory and the effect of year-to-year changes in the insurers that report their data to the ISO. The “actual” loss cost change is a comparison of the 2014-2016 average loss cost to the 2013-2015 loss cost, without any adjustment for potential distortions.

Table 4: Proposed Commercial Vehicle Rate Changes

In determining the overall commercial premium level change, TAIPA considered its 2015 premium volume by coverage and by type of commercial vehicle. TAIPA has no premium volume for vans or any of the zone-rated vehicles. As a result, the estimated all-coverage premium change is not impacted by the base rate change proposed for vans and zone-rated vehicles.
