

Texas Automobile Insurance Plan Association
2022 Private Passenger Auto and Commercial Vehicle Rate Filing
Explanatory Memorandum

Introduction

TAIPA is proposing an overall average rate level change of +5.0% for private passenger cars. The average increase is generated by changes in the base rates for each territory. No changes are proposed in the current territory rate factors or class rate factors.

TAIPA is also proposing changes in base rates for commercial vehicles that will generate an overall average change of +5.0% in commercial vehicle premiums. No changes in any rate factors for commercial vehicles are being proposed in this filing.

Background

In 2004 over 12,000 private passenger cars were being insured through TAIPA. For nearly a decade, TAIPA's insured exposure counts have remained very low and relatively stable from year to year. Since 2015 TAIPA's private passenger earned exposures have varied in a narrow range from a low of about 975 to a high of about 1,150.

With less than 1% of the insured private passenger cars in Texas being insured through TAIPA, we conclude that the voluntary competitive market is serving the vast majority of vehicles insured in Texas and that TAIPA is appropriately functioning as the insurer of last resort, just as the legislature originally intended. While a low count of insureds for TAIPA is the desirable situation, the low count does create challenges to traditional ratemaking procedures. The low count of insured vehicles means there are not enough historical claim losses to provide a credible database of assigned risk claim losses that are necessary to apply traditional actuarial ratemaking procedures.

TAIPA's Ratemaking Procedures

A decade ago when TAIPA had a much larger claim loss database, it used a classical actuarial ratemaking procedure that involved adjusting past premiums to the present rate level and the projection of past losses and expenses to future expected cost levels. When TAIPA's actuarially determined rate change indications were determined to be less than 100% credible, the TDI required that the complement of the credibility be applied to the selected annual loss trend for each coverage. In other words, when the traditional actuarial ratemaking procedures were applied to TAIPA data with zero credibility, the resulting indicated rate change was set equal to the historical annual trend in claim losses for each coverage.

Due to the low count of TAIPA insured vehicles and the lack of any actuarial credibility in TAIPA's claim loss data, it became apparent in 2015 to both TAIPA and the TDI that there was a need to simplify TAIPA's past ratemaking procedures. TAIPA referred to this new ratemaking procedure as "indexing" to the historical annual change in industrywide Texas loss costs. The procedure could also be described as tracking the annual trend in claim losses, which essentially replicates the procedure used by actuaries

when the sophisticated actuarial rate change indications are determined to have zero actuarial credibility. The historical changes in loss costs which TAIPA has been tracking are commonly referred to as “loss trends.” The updated loss trends are shown in the attached Exhibit II.

Proposed Private Passenger Rates

Rate Level Changes

Reliance on the Texas loss cost trend data as a basis for TAIPA’s private passenger rate changes has minimized the occurrence of large swings in the magnitude of the rate changes. This is because the Texas loss trends for the last several years have exhibited minimal fluctuation in claim frequencies and modest increases in the claim severities. As stated in past TAIPA rate filings, if the Texas loss trends were to be distorted by an unexpected anomalous event, or if economic conditions changed dramatically, then it may be necessary to adjust TAIPA’s ratemaking procedure of tracking the historical 3-year loss trends.

This is the first TAIPA rate filing in seven years where TAIPA has needed to adjust its reliance on the 3-year paid pure premium trends as the basis for its proposed rate change. This adjustment in ratemaking procedures is necessary because the historic loss data have been impacted by both an anomalous event in 2020 and a recent significant change in economic conditions.

Recently the U.S. economy began experiencing general price inflation of approximately 8% per year. Most economists expect that price inflation in the 7% - 8% range will persist for the next few years. The full effect of this high inflation rate has not yet fully impacted the average claim cost trends presented in Exhibit II. The significant increases in average claim costs in the 2nd quarter of 2022 in Exhibit II are likely to persist for the next year or two. In TAIPA’s judgment, the significant increase in inflation and its expected impact on future claim severity trends should be considered as part of the justification for TAIPA’s proposed rate increase.

In early 2020 with the onset of the COVID pandemic there was a temporary closing of some businesses. Many workers began working from home and driving patterns changed. The Texas data in Exhibit II show a significant and anomalous drop in claim frequencies during 2020. In early 2021 claim frequencies began to increase from their post-COVID low point back to their normal levels. The distortion in TAIPA’s loss trends caused by the COVID shutdown and the subsequent rebound in claim frequency levels must also be considered as part of the justification for TAIPA’s proposed rate increase.

Loss Trend Data

Both the claim frequency and the pure premium trends are distorted by the temporary and significant reduction in the number of claims in 2020. As shown in the following Table 1, claim frequency and pure premium trends that include 2020 data are suppressed due to the COVID shutdown of business activity. Claim frequency and pure premium trends that include only 2021 and 2022 data tend to be exaggerated because claim frequencies were increasing back to their normal levels from the COVID low point in 2020. For example, the 3-year BI frequency trend which includes 2020 frequency data is -7.0%. The 1-year trend which reflects the post-COVID return to normal frequency levels is +7.7%. This sharp swing in claim frequency trends is a distortion due to the COVID shutdown.

In short, we expect the latest claim cost trends to escalate due to inflation and the latest claim frequency levels to hold relatively constant.

The loss trend data which underlie the trends presented in the following Table 1 are presented in the attached Exhibit II.

Table 1: Private Passenger Loss Cost Trends

Coverage	Pd. Freq.		Pd. Cost		Pd. Pure Premium	
	3-Yr.	1-Yr.	3-Yr.	1-Yr.	3-Yr.	1-Yr.
BI Liability	-7.0%	+7.7%	+10.9%	+12.4%	+4.2%	+20.1%
PD Liability	-12.8%	+15.0%	+8.2%	+15.3%	-4.0%	+30.3%
PIP	-11.6%	+11.1%	+6.9%	+7.4%	-4.4%	+18.2%
UM-BI	+7.4%	+20.2%	+7.8%	+12.1%	+15.5%	+31.3%
UM-PD	-6.1%	+7.8%	+9.5%	+11.3%	+3.8%	+19.0%

Proposed Private Passenger Rate Changes

In TAIPA's judgment both the 3-year and 1-year claim frequency and pure premium trends are distorted due to the temporary anomalous reduction in 2020 claim frequencies due to the COVID shutdown. The 3-year frequency and pure premium trends in Table 2 are depressed because these trends include the anomalous 2020 claim frequency data. The 1-year trends are exaggerated because they reflect the sharp return to normal claim frequency levels from the COVID lows.

In this filing TAIPA is relying primarily on the 3-year average claim cost trends because the COVID shutdown did not distort the severity trends, as it did for the claim frequency trends. TAIPA's reliance on the claim cost trends is equivalent to assuming that there will be a 0% frequency trend in the 2022 frequency levels.

It has been TAIPA's practice to limit its rate increases to +5%. TAIPA believes that the Texas claim cost trends, in conjunction with the general inflation rate of 7% to 8%, would justify a rate increase in excess of +5.0%. TAIPA chooses to stay with its normal practice of limiting the increase to 5% and then reassess economic conditions in a year.

TAIPA is proposing a 5% increase in base rates for each of its five coverages, resulting in an overall average increase of +5.0%. The current and proposed base rates are presented in Exhibits I.

Commercial Vehicle Rates

Basis for Proposed Rate Changes

For several years prior to its 2015 rate filing, TAIPA's commercial vehicle rates were derived directly from the voluntary market loss costs filed in Texas by the ISO. During that era, TAIPA subscribed to the ISO loss costs and the actuarial staff of the TDI used those loss costs to calculate TAIPA's commercial vehicle rate schedule. By 2015 this approach was no longer cost-effective for TAIPA. With so few insured commercial vehicles, the ISO subscription fees, when expressed on a per insured vehicle basis, were no longer economically reasonable.

Beginning with its 2015 rate filing, TAIPA began tracking the annual change in the voluntary market's loss costs and using those loss cost changes as the basis for its annual rate changes. TAIPA originally anticipated that the annual change in the three-year average loss costs for the voluntary commercial vehicle market would provide a sufficiently reliable and credible indication of the actual trend in Texas loss costs.

TAIPA's original anticipation of reasonable stability in the voluntary market's three-year average loss costs has never been realized. Instead we have observed large, random swings in the three-year loss costs for commercial vehicles. Some of the random variation was undoubtedly due to TAIPA's need to subdivide the aggregate commercial vehicle loss data into eleven (11) categories of commercial vehicles.

For three past rate filings TAIPA attempted to remove some of the random variation in the loss cost data by normalizing the data for distribution shifts between territories and for the effects of year-to-year changes in the insurers that report their data to the ISO. None of those past attempts to remove distortions in the commercial loss cost data were fruitful. Even after attempting to remove some of the variations in the loss cost data, the adjusted three-year average loss costs were highly variable with insufficient credibility for ratemaking purposes.

TAIPA now believes that the TDI's biennial report on the state of the Texas commercial vehicle insurance market is our best source of the rate activity in the voluntary market for commercial vehicles.

Since TAIPA is intended to be an insurer-of-last-resort, TAIPA rates should not be overly competitive with the rates being charged by voluntary insurers if the Texas voluntary market is to function efficiently. However, at page 14 of the November 2022 Biennial Report, the TDI presents data showing that commercial vehicle rates in the voluntary market increased a total of +44.8% during the period 2017 through 2022. The average annual rate increase was 6.4%. During the same time period, TAIPA implemented five commercial vehicle rate changes that averaged +3.5%. The cumulative effect of TAIPA's five rate changes was +19.0%. TAIPA's cumulative rate change of +19.0%, as compared to the voluntary market +44.8% cumulative rate change, indicates that TAIPA's commercial vehicle rate levels have significantly lagged the voluntary market rates.

Proposed Commercial Rates

In the following Table 2 we present data derived from the TDI's November 2022 Biennial Report. The loss ratios in Column (2) are from page 23 of the report and the average premiums in Column (3) are from page 17. The average loss costs in Column (4) are the product of Column (2) times Column (3).

Table 2: All Types Commercial Vehicles

(1)	(2)	(3)	(4)	(5)
<u>Year</u>	<u>Loss Ratio</u>	<u>Ave. Prem.</u>	<u>Loss Cost</u>	<u>Loss Cost Chg.</u>
2017	.903	\$1,169	\$1,056	---
2018	.914	1,226	1,121	+6.2%
2019	.904	1,390	1,257	+12.1%
2020	.741	1,473	1,091	-13.2%
2021	.800	1,757	1,406	+28.9%
2022	.786	1,754	1,379	-1.9%
Average				+6.4%

We expect that the -13.2% decrease in the 2020 average loss costs and the rebounding increase of 28.9% in 2021 shown in Table 2 reflect the temporary impact of the COVID shutdown on the claim frequencies for commercial vehicles. The average annual increase in loss costs in Table 2 is +6.4%, compared to TAIPA's average rate change of +3.5%

In TAIPA's judgment the average annual increase in loss costs of 6.4%, the fact that TAIPA commercial rates significantly lag the voluntary market rate levels, and the 7% to 8% inflation rate in the general economy, all support an increase of at least +5% in TAIPA's commercial vehicle rates.

TAIPA is proposing an across-the-board +5% increase in base rates for all coverages and all types of commercial vehicles. The current and proposed commercial base rates are presented in Exhibits III. The proposed overall average commercial vehicle rate change is +5.0%.
