NOTICE OF INDEPENDENT REVIEW DECISION

DATE OF REVIEW:

Jul/29/2009

IRO CASE #:

DESCRIPTION OF THE SERVICE OR SERVICES IN DISPUTE:

Work conditioning program x 4 weeks, lumbar (reference *** #928273.01*** 97545, 97546)

DESCRIPTION OF THE QUALIFICATIONS FOR EACH PHYSICIAN OR OTHER HEALTH CARE PROVIDER WHO REVIEWED THE DECISION:

Chiropractor, AADEP Certified
Whole Person Certified
Certified Electrodiagnostic Practitioner

REVIEW OUTCOME:

Upon independent review, the reviewer finds that the previous adverse determination/adverse determinations should be:

Upheld (Agree)

Overturned (Disagree)

Partially Overturned (Agree in part/Disagree in part)

PATIENT CLINICAL HISTORY SUMMARY

The injured employee was involved in an occupational MVC injury while working for . The injured employee was pregnant which delayed her treatment. She was released in Jan 2009 by her OB. She was seen by a designated doctor on 1-06-2009 and it was indicated that she was not at MMI. DDE indicated that advanced diagnostics would not be warranted. Records indicate that the injured employee has completed 24 supervised sessions. A work conditioning program x4 weeks is now being requested.

ANALYSIS AND EXPLANATION OF THE DECISION INCLUDING CLINICAL BASIS, FINDINGS

AND CONCLUSIONS USED TO SUPPORT THE DECISION

The injured worker does not meet the criteria for a 4 week (20 sessions) work conditioning program. A request for 20-sessions exceeds the ODG recommended 10 initial sessions. Records show the injured worker is performing at Medium PDL and her job requires Medium PDL. Review of records did not reveal a defined return to work goal agreement signed by the employer and employee and a specific job to return to. The request does not meet the guidelines. The reviewer finds that medical necessity does not exist for Work conditioning program x 4 weeks, lumbar (reference *** #928273.01 *** 97545, 97546).

ODG Physical Therapy Guidelines – Work Conditioning

10 visits over 8 weeks

(5) A defined return to work goal agreed to by the employer & employee

(a) A documented specific job to return to with job demands that exceed abilities, or

(b) Documented on-the-job training

Work conditioning, work hardening Recommended as an option, depending on the availability of quality programs, and should be specific for the job individual is going to return to. (Schonstein-Cochrane, 2003) There is limited literature support for multidisciplinary treatment and work hardening for the neck, hip, knee, shoulder and forearm. (Karjalainen, 2003) Work Conditioning should restore the client's physical capacity and function. Work Hardening should be work simulation and not just therapeutic exercise, plus there should also be psychological support. Work Hardening is an interdisciplinary, individualized, job specific program of activity with the goal of return to work. Work Hardening programs use real or simulated work tasks and progressively graded conditioning exercises that are based on the individual's measured tolerances. (CARF, 2006) (Washington, 2006) The need for work hardening is less clear for workers in sedentary or light demand work, since on the job conditioning could be equally effective, and an examination should demonstrate a gap between the current level of functional capacity and an achievable level of required job demands. As with all intensive rehab programs, measurable functional improvement should occur after initial use of WH. It is not recommended that patients go from work conditioning to work hardening to chronic pain programs, repeating many of the same treatments without clear evidence of benefit. (Schonstein-Cochrane, 2008)

Criteria for admission to a Work Hardening Program

(1) Work related musculoskeletal condition with functional limitations precluding ability to safely achieve current job demands, which are in the medium or higher demand level (i.e., not clerical/sedentary work). An FCE may be required showing consistent results with maximal effort, demonstrating capacities below an employer verified physical demands analysis (PDA)

(2) After treatment with an adequate trial of physical or occupational therapy with improvement followed by plateau, but not likely to benefit from continued physical or occupational therapy, or general conditioning

(3) Not a candidate where surgery or other treatments would clearly be warranted to improve function

(4) Physical and medical recovery sufficient to allow for progressive reactivation and participation for a minimum of 4 hours a day for three to five days a week

(5) A defined return to work goal agreed to by the employer & employee

(a) A documented specific job to return to with job demands that exceed abilities, or

(b) Documented on-the-job training

(6) The worker must be able to benefit from the program (functional and psychological limitations that are likely to improve with the program). Approval of these programs should require a screening process that includes file review, interview and testing to determine likelihood of success in the program

(7) The worker must be no more than 2 years past date of injury. Workers that have not returned to work by two years post injury may not benefit

(8) Program timelines: Work Hardening Programs should be completed in 4 weeks consecutively or less

(9) Treatment is not supported for longer than 1-2 weeks without evidence of patient compliance and demonstrated significant gains as documented by subjective and objective gains and measurable improvement in functional abilities

(10) Upon completion of a rehabilitation program (e.g. work hardening, work conditioning, outpatient medical rehabilitation) neither re-enrollment in nor repetition of the same or similar rehabilitation program is medically warranted for the same condition or injury
