

**IRO Certificate #4599**

**NOTICE OF INDEPENDENT REVIEW DECISION**

December 6, 2002

**Re: IRO Case # M2-02-0766**

Texas Worker's Compensation Commission:

\_\_\_ has been certified as an independent review organization (IRO) and has been authorized to perform independent reviews of medical necessity for the Texas Worker's Compensation Commission (TWCC). Texas HB. 2600, Rule133.308 effective January 1, 2002, allows a claimant or provider who has received an adverse medical necessity determination from a carrier's internal process, to request an independent review by an IRO.

In accordance with the requirement that TWCC assign cases to certified IROs, TWCC assigned this case to \_\_\_ for an independent review. \_\_\_ has performed an independent review of the proposed care to determine if the adverse determination was appropriate. For that purpose, \_\_\_ received relevant medical records, any documents obtained from parties in making the adverse determination, and any other documents and/or written information submitted in support of the appeal.

The case was reviewed by a physician who is Board Certified in Neurological Surgery. He or she has signed a certification statement attesting that no known conflicts of interest exist between him or her and any of the treating physicians or providers, or any of the physicians or providers who reviewed the case for a determination prior to referral to \_\_\_ for independent review. In addition, the certification statement further attests that the review was performed without bias for or against the carrier, medical provider, or any other party to this case.

The determination of the \_\_\_ reviewer who reviewed this case, based on the medical records provided, is as follows:

History

The patient is a 38-year-old male who in \_\_\_ hit his head during a truck collision. He has had persistent pain in his neck associated with left upper extremity discomfort. The pain persists despite conservative measures, including injections into the cervical spine. Discographic evaluation showed that the injection at the C5-6 level created concordant pain. Pain was non concordant at the C6-7 level.

Requested Service

Cervical discectomy with fusion

Decision

I disagree with the carrier's decision to deny the requested treatment.

Rationale

Various findings on the MRI plus persistent symptoms suggest that after this long wait in hopes of improvement with conservative measures that the proposed operative procedure is indicated. There were significant findings on two tests, and there is persistent discomfort.

This medical necessity decision by an Independent Review Organization is deemed to be a Commission decision and order.

**YOUR RIGHT TO REQUEST A HEARING**

Either party to this medical dispute may disagree with all or part of the decision and has a right to request a hearing.
