

IRO Certificate #4599

NOTICE OF INDEPENDENT REVIEW DECISION

September 6, 2002

Re: IRO Case # M2-02-1026-01

Texas Worker's Compensation Commission:

___ has been certified as an independent review organization (IRO) and has been authorized to perform independent reviews of medical necessity for the Texas Worker's Compensation Commission (TWCC). Texas HB. 2600, Rule133.308 effective January 1, 2002, allows a claimant or provider who has received an adverse medical necessity determination from a carrier's internal process, to request an independent review by an IRO.

In accordance with the requirement that TWCC assign cases to certified IRO's, TWCC assigned this case to ___ for an independent review. ___ has performed an independent review of the proposed care to determine if the adverse determination was appropriate. For that purpose, ___ received relevant medical records, any documents obtained from parties in making the adverse determination, and any other documents and/or written information submitted in support of the appeal.

The case was reviewed by a physician who is Board Certified in Neurological Surgery. He or she has signed a certification statement attesting that no known conflicts of interest exist between him or her and any of the treating physicians or providers, or any of the physicians or providers who reviewed the case for a determination prior to referral to ___ for independent review. In addition, the certification statement further attests that the review was performed without bias for or against the carrier, medical provider, or any other party to this case.

The ___ reviewer who reviewed this case has determined that, based on the medical records provided, the requested treatment is medically necessary. Therefore, ___ disagrees with the adverse determination regarding this case. The reviewer's decision and the specific reasons for it, is as follows:

History

This case involves a 30-year-old male who injured his back on ___. He subsequently had a decompressive laminectomy at L4 through S1 along with a fusion at L4 through S1, with pedicle screw placement along with rods and cages. As of July, 2002, the patient continues to have pain in the lumbar spine. A CT myelogram on 4/11/02 indicated that a possible explanation for this pain may be spinal stenosis as L2-4 and L3-4, which are the two levels above the fusion. The fusion appeared to be in tact, and the metallic cages appeared to be stable.

Requested Service(s)

Discogram with CT, L2-3, L3-4

Decision

I disagree with the carrier's decision to deny the requested discogram with CT.

Rationale

The possibility that the patient's back pain is being caused by changes at the L2-3 and L3-4 levels is great enough that discographic evaluation may well produce concomitant pain and show disk change that would suggest that some operative procedure may be necessary to deal with the patient's discomfort.

This medical necessity decision by an Independent Review Organization is deemed to be a Commission decision and order.
