

**IRO Certificate #4599**

**NOTICE OF INDEPENDENT REVIEW DECISION**

October 10, 2002

**Re: IRO Case # M2-03-0030-01**

Texas Worker's Compensation Commission:

\_\_\_ has been certified as an independent review organization (IRO) and has been authorized to perform independent reviews of medical necessity for the Texas Worker's Compensation Commission (TWCC). Texas HB. 2600, Rule133.308 effective January 1, 2002, allows a claimant or provider who has received an adverse medical necessity determination from a carrier's internal process, to request an independent review by an IRO.

In accordance with the requirement that TWCC assign cases to certified IRO's, TWCC assigned this case to \_\_\_ for an independent review. \_\_\_ has performed an independent review of the proposed care to determine if the adverse determination was appropriate. For that purpose, \_\_\_ received relevant medical records, any documents obtained from parties in making the adverse determination, and any other documents and/or written information submitted in support of the appeal.

The case was reviewed by a physician who is Board Eligible in Orthopedic Surgery. He or she has signed a certification statement attesting that no known conflicts of interest exist between him or her and any of the treating physicians or providers, or any of the physicians or providers who reviewed the case for a determination prior to referral to \_\_\_ for independent review. In addition, the certification statement further attests that the review was performed without bias for or against the carrier, medical provider, or any other party to this case.

The determination of the \_\_\_ reviewer who reviewed this case, based on the medical records provided, is as follows:

History

This case involves a 61-year-old male custodian with a remote wrist injury who was reportedly asymptomatic until an injury on \_\_\_. He suffered a direct blow to the dorsum of the wrist, and developed pain, swelling, cystic masses in the wrist as well as difficulty with digital extension. Reconstructive surgery and tendon repair was not successful, and a wrist arthrodesis has been recommended.

Requested Service

Right wrist fusion with iliac crest bone graft

Decision

I disagree with the carrier's decision to deny the requested treatment.

Rationale

Although the patient's underlying wrist arthritis and Kiehböck's disease are certainly chronic and NOT related to the injury, his recent deterioration is related. His injury has permanently and irreversibly diminished his wrist and hand function. Salvage synovectomy and tendon reconstruction have not helped significantly, and the proposed procedure will most likely allow the patient to return to his position and become a productive employee again.

This medical necessity decision by an Independent Review Organization is deemed to be a Commission decision and order.

**YOUR RIGHT TO REQUEST A HEARING**
