

IRO Certificate #4599

NOTICE OF INDEPENDENT REVIEW DECISION

February 17, 2003

Re: IRO Case # M2-03-0589

Texas Worker's Compensation Commission:

___ has been certified as an independent review organization (IRO) and has been authorized to perform independent reviews of medical necessity for the Texas Worker's Compensation Commission (TWCC). Texas HB. 2600, Rule133.308 effective January 1, 2002, allows a claimant or provider who has received an adverse medical necessity determination from a carrier's internal process, to request an independent review by an IRO.

In accordance with the requirement that TWCC assign cases to certified IROs, TWCC assigned this case to ___ for an independent review. ___ has performed an independent review of the proposed care to determine if the adverse determination was appropriate. For that purpose, ___ received relevant medical records, any documents obtained from parties in making the adverse determination, and any other documents and/or written information submitted in support of the appeal.

The case was reviewed by a physician who is Board Certified in Neurological Surgery. He or she has signed a certification statement attesting that no known conflicts of interest exist between him or her and any of the treating physicians or providers, or any of the physicians or providers who reviewed the case for a determination prior to referral to ___ for independent review. In addition, the certification statement further attests that the review was performed without bias for or against the carrier, medical provider, or any other party to this case.

The determination of the ___ reviewer who reviewed this case, based on the medical records provided, is as follows:

History

The patient is a now 46-year-old female who on ___ fell to a concrete floor. The patient developed neck pain, left elbow pain, low back pain, and extension of the low back pain into the hip region. Electrodiagnostic testing on 7/12/02 was normal. The only potentially positive finding was straight leg raising being positive on the right side soon after the injury. An MRI 6/12/02 showed L4-5, L3-4, T12-L1 bulging with desiccation of the disk, but no distinct disk herniation was thought present, and there was no mention of nerve root compression.

Requested Service

Lumbar discogram with post CT scan at L1-L2, L2-L3, L3-L4, L5-S1

Decision

I agree with the carrier's decision to deny the requested multi level discographic evaluation.

Rationale

Tests are usually done to find a therapy that might deal with the problem being evaluated. Under the circumstances of this multi level lumbar discography, I cannot imagine anything that would be found that would lead to a therapeutic conclusion in dealing with this patient's problem.

This medical necessity decision by an Independent Review Organization is deemed to be a Commission decision and order.
