

IRO Certificate #4599

NOTICE OF INDEPENDENT REVIEW DECISION

June 1, 2003

Re: IRO Case # M2-03-0613

Texas Worker's Compensation Commission:

___ has been certified as an independent review organization (IRO) and has been authorized to perform independent reviews of medical necessity for the Texas Worker's Compensation Commission (TWCC). Texas HB. 2600, Rule133.308 effective January 1, 2002, allows a claimant or provider who has received an adverse medical necessity determination from a carrier's internal process, to request an independent review by an IRO.

In accordance with the requirement that TWCC assign cases to certified IROs, TWCC assigned this case to ___ for an independent review. ___ has performed an independent review of the proposed care to determine if the adverse determination was appropriate. For that purpose, ___ received relevant medical records, any documents obtained from parties in making the adverse determination, and any other documents and/or written information submitted in support of the appeal.

The case was reviewed by a physician who is Board Certified in Neurological Surgery. He or she has signed a certification statement attesting that no known conflicts of interest exist between him or her and any of the treating physicians or providers, or any of the physicians or providers who reviewed the case for a determination prior to referral to ___ for independent review. In addition, the certification statement further attests that the review was performed without bias for or against the carrier, medical provider, or any other party to this case.

The determination of the ___ reviewer who reviewed this case, based on the medical records provided, is as follows:

History

The patient is a 40-year-old female who developed neck and left shoulder pain after lifting heavy pieces of metal on ___. Physical therapy and various injections have been tried, but the patient's neck pain continues. Both CT and MRI evaluations of the cervical spine show C5-6 changes and bulging without any significant spinal stenosis according to the consulting orthopedic surgeon. No radiology reports, however, were presented for this review. Nothing in the notes provided for this review reveals the results of facet injections of the cervical spine.

Requested Service

Radio frequency rhizotomy 3-levels bilaterally

Decision

I agree with the carrier's decision to deny the requested treatment.

Rationale

Nothing in the documentation provided for this review indicates that facet injections were of any benefit to the patient, and there is nothing on any x-ray reports that were presented that would suggest that there is significant facet arthropathy. One would expect at least transient benefit from the facet injections in the cervical spine before considering the requested procedure. Nothing was presented for this review that would show that that has occurred.

This medical necessity decision by an Independent Review Organization is deemed to be a Commission decision and order.
