

IRO Certificate #4599

NOTICE OF INDEPENDENT REVIEW DECISION

June 1, 2003

Re: IRO Case # M2-03-0949

Texas Worker's Compensation Commission:

___ has been certified as an independent review organization (IRO) and has been authorized to perform independent reviews of medical necessity for the Texas Worker's Compensation Commission (TWCC). Texas HB. 2600, Rule133.308 effective January 1, 2002, allows a claimant or provider who has received an adverse medical necessity determination from a carrier's internal process, to request an independent review by an IRO.

In accordance with the requirement that TWCC assign cases to certified IROs, TWCC assigned this case to ___ for an independent review. ___ has performed an independent review of the proposed care to determine if the adverse determination was appropriate. For that purpose, ___ received relevant medical records, any documents obtained from parties in making the adverse determination, and any other documents and/or written information submitted in support of the appeal.

The case was reviewed by a physician who is Board Certified in Neurological Surgery. He or she has signed a certification statement attesting that no known conflicts of interest exist between him or her and any of the treating physicians or providers, or any of the physicians or providers who reviewed the case for a determination prior to referral to ___ for independent review. In addition, the certification statement further attests that the review was performed without bias for or against the carrier, medical provider, or any other party to this case.

The determination of the ___ reviewer who reviewed this case, based on the medical records provided, is as follows:

History

The patient is a 40-year-old male who on ___ was lifting an awning and developed sharp pain in the left shoulder and arm. Physical therapy and medication were of no help. Examination strongly suggested C7 nerve root involvement. This was also seen on an MRI of the cervical spine. The MRI also suggested some difficulties at both the C4-5 and C5-6 levels also. On CT myelographic evaluation this also proved to be the case, and these changes also included possible changes in the spinal cord.

Requested Service

3-level anterior cervical discectomy and fusion with plating C4-5, C5-6 and C6-7

Decision

I disagree with the carrier's decision to deny the requested extensive surgical procedure.

Rationale

To operate on a probably work-related problem at C6-7 and not try to take care of the other areas of potentially even greater disabling pathology would be negligent in the opinion of most spinal surgeons. Aggravation of the two levels above the area of C6-7 is medically probable if all levels are not stabilized and decompressed.

This medical necessity decision by an Independent Review Organization is deemed to be a Commission decision and order.
