

NOTICE OF INDEPENDENT REVIEW DECISION

May 23, 2003

RE: MDR Tracking #: M2-03-0959-01
IRO Certificate #: IRO4326

The ___ has been certified by the Texas Department of Insurance (TDI) as an independent review organization (IRO). The Texas Workers' Compensation Commission (TWCC) has assigned the above referenced case to ___ for independent review in accordance with TWCC Rule §133.308 which allows for medical dispute resolution by an IRO.

___ has performed an independent review of the proposed care to determine if the adverse determination was appropriate. In performing this review, relevant medical records, any documents utilized by the parties referenced above in making the adverse determination, and any documentation and written information submitted in support of the appeal was reviewed.

The independent review was performed by a ___ physician reviewer who is board certified in neurosurgery which is the same specialty as the treating physician. The ___ physician reviewer has signed a certification statement stating that no known conflicts of interest exist between him or her and any of the treating physicians or providers or any of the physicians or providers who reviewed the case for a determination prior to the referral to ___ for independent review. In addition, the reviewer has certified that the review was performed without bias for or against any party to this case.

Clinical History

This patient had an on the job injury ___ leaving her with a left C7 radiculopathy and nerve root compression from foraminal stenosis. She had a cervical myelogram on 06/28/02 but it was technically inadequate as no dye was seen in the cervical spinal canal. Surgery is being considered as her symptoms have persisted for 1½ years.

Requested Service(s)

Cervical CT scan with reconstruction

Decision

It is determined that the cervical CT scan with reconstruction is medically necessary to treat this patient's condition.

Rationale/Basis for Decision

A cervical CT scan is a reasonable test for assessing the anatomic condition prior to surgery in a patient with persistent radiculopathy. This is especially true in a patient who has apparently had a marginal experience with myelography in the past.

This decision by the IRO is deemed to be a TWCC decision and order.
