

NOTICE OF INDEPENDENT REVIEW DECISION

July 23, 2003

RE: MDR Tracking #: M2-03-1138-01-SS
IRO Certificate #: IRO4326

___ has been certified by the Texas Department of Insurance (TDI) as an independent review organization (IRO). The Texas Workers' Compensation Commission (TWCC) has assigned the above referenced case to ___ for independent review in accordance with TWCC Rule §133.308 which allows for medical dispute resolution by an IRO.

___ has performed an independent review of the proposed care to determine if the adverse determination was appropriate. In performing this review, relevant medical records, any documents utilized by the parties referenced above in making the adverse determination, and any documentation and written information submitted in support of the appeal was reviewed.

The independent review was performed by a ___ physician reviewer who is board certified in neurosurgery which is the same specialty as the treating physician. The ___ physician reviewer has signed a certification statement stating that no known conflicts of interest exist between him or her and any of the treating physicians or providers or any of the physicians or providers who reviewed the case for a determination prior to the referral to ___ for independent review. In addition, the reviewer has certified that the review was performed without bias for or against any party to this case.

Clinical History

This patient sustained an injury on ___ while lifting luggage and twisting, causing damage to her lower back. She developed severe low back pain radiating to her legs, greater on the left. Conservative measures tried have been anti-inflammatory, narcotic, and muscle relaxant medications, physical therapy, and epidural steroid injections. A lumbar MRI revealed disc bulging and a possible annular tear at L4-5 and a positive discogram at this same level.

Requested Service(s)

L4-5 posterior fusion with pedicle screws and instrumentation

Decision

It is determined that the proposed L4-5 posterior fusion with pedicle screws and instrumentation is medically necessary to treat this patient's condition.

Rationale/Basis for Decision

Based on the review of the medical record provided, this surgery as proposed is medically necessary and appropriate for this patient. The patient's symptom's and physical exam are consistent with the physical abnormality at L4-5, as determined by diagnostic testing. In addition, she has failed conservative treatment over a greater than two year period. Therefore, it is determined that the proposed L4-5 posterior fusion with pedicle screws and instrumentation is medically necessary.

This decision by the IRO is deemed to be a TWCC decision and order.
