

NOTICE OF INDEPENDENT REVIEW DETERMINATION

MDR Tracking Number: M2-03-1786-01

October 2, 2003

An independent review of the above-referenced case has been completed by a medical physician board certified in family practice. The appropriateness of setting and medical necessity of proposed or rendered services is determined by the application of medical screening criteria published by ____, or by the application of medical screening criteria and protocols formally established by practicing physicians. All available clinical information, the medical necessity guidelines and the special circumstances of said case was considered in making the determination.

The independent review determination and reasons for the determination, including the clinical basis for the determination, is as follows:

See Attached Physician Determination

___ hereby certifies that the reviewing physician is on Texas Workers' Compensation Commission Approved Doctor List (ADL). Additionally, said physician has certified that no known conflicts of interest exist between him and any of the treating physicians or providers or any of the physicians or providers who reviewed the case for determination prior to referral to ___.

Notice of Independent Review Determination

CLINICAL HISTORY

Patient sustained a work related injury on ____. She had extensive evaluations and treatments including therapy, medication, work hardening program, epidural steroid injection, multiple radiographs, a TENS unit, a muscle stimulator, and an anterior cervical fusion.

REQUESTED SERVICE(S)

Purchase of an interferential muscle stimulator.

DECISION

Uphold previous denial.

RATIONALE/BASIS FOR DECISION

___ sustained her injury on ___ and continued to have pain and dysfunction long after her fusion on 11/15/95 and extensive conservative treatment as well. She

had a permanent impairment rating of 9% on 6/6/96. Unfortunately, she has a failed fusion and became a chronic pain patient. The requested device is considered an adjunctive therapy in an acute setting. No double-blinded, peer reviewed literature justifies the use of a muscle stimulator for chronic pain after a cervical fusion. Therefore, the prior denial is upheld.
