___ has been certified by the Texas Department of Insurance as an Independent Review Organization. The Texas Worker's Compensation Commission has assigned this case to ___ for independent review in accordance with TWCC Rule 133.308 which allows for medical dispute resolution by an IRO.

___ has performed an independent review of the proposed care to determine if the adverse determination was appropriate. In performing this review, all relevant medical records and documentation utilized to make the adverse determination, along with any documentation and written information submitted, was reviewed.

The independent review was performed by a matched peer with the treating doctor. This case was reviewed by a licensed Doctor of Osteopathy with a specialty and board certification in Neurological Surgery. The reviewer is on the TWCC Approved Doctor List (ADL). The ___ health care professional has signed a certification statement stating that no known conflicts of interest exist between the reviewer and any of the treating doctors or providers or any of the doctors or providers who reviewed the case for a determination prior to the referral to ___ for independent review. In addition, the reviewer has certified that the review was performed without bias for or against any party to the dispute.

CLINICAL HISTORY

___ suffered a work-related injury on ___ resulting in back and leg pain. He had surgery several years ago at the L4/5 level. He has had complaints according to ___; on his initial visit of 25% back pain, 75% leg pain components. An MRI showed no disc herniation, degenerative disc at 4-5 and extensive scarring in the 4-5 level at his previous surgical site. He is asked to have discogram performed at the lower lumbar levels that will help decide whether interbody fusion is a reasonable option for him.

REQUESTED SERVICE

A lumbar CT/discogram x3 is requested for this patient.

DECISION

The reviewer agrees with the prior adverse determination.

BASIS FOR THE DECISION

Although discography is useful in patients with chronic low back pain, it has not been useful for identification in patients with leg pain. In addition, interbody fusion is usually not used for the leg pain component, and this patient appears to have predominant leg pain as opposed to back pain, neither of which would respond to interbody fusion treatment. The only reason to do the

discogram is to see if he is a candidate for interbody fusion. Therefore, the reviewer finds that the requested procedure should be denied.

The reviewer has reviewed literature in Spine Journal since 1995 and there are no results available for the evidence of interbody fusion used for radiculopathy. Rather, it has only been used for back pain component.

___ has performed an independent review solely to determine the medical necessity of the health services that are the subject of the review. ___ has made no determinations regarding benefits available under the injured employee's policy.

As an officer of ___, I certify that there is no known conflict between the reviewer, ___ and/or any officer/employee of the IRO with any person or entity that is a party to the dispute.

___ is forwarding by mail and, in the case of time sensitive matters by facsimile, a copy of this finding to the treating doctor, payor and/or URA, patient and the TWCC.

Sincerely,

YOUR RIGHT TO REQUEST A HEARING
