RE: Purchase of muscle stimulator

Clinical History: Sustained a lumbar injury. This was treated surgically. Within nine months there was a solid fusion and mild low back pain. Claimant returned to work. Several months later there was an exacerbation of the low back complaints. Repeat CT scan noted disc 'defects' at the L5/S1 level. Non-letter progress notes from requestor noted request for the purchase of this device. This was denied by several pre-authorization providers.

Decision: Denied

The primary treating physician failed to produce any "...objective and independently confirmable medical evidence demonstrating the efficacy of this device...progress notes...indicate a well healed wound and the surgical intent was reached."
