

**IRO Certificate #4599**

**NOTICE OF INDEPENDENT REVIEW DECISION**

December 19, 2003

**Re: IRO Case # M2-04-0515**

Texas Worker's Compensation Commission:

\_\_\_ has been certified as an independent review organization (IRO) and has been authorized to perform independent reviews of medical necessity for the Texas Worker's Compensation Commission (TWCC). Texas HB. 2600, Rule 133.308 effective January 1, 2002, allows a claimant or provider who has received an adverse medical necessity determination from a carrier's internal process, to request an independent review by an IRO.

In accordance with the requirement that TWCC assign cases to certified IROs, TWCC assigned this case to \_\_\_ for an independent review. \_\_\_ has performed an independent review of the proposed care to determine if the adverse determination was appropriate. For that purpose, \_\_\_ received relevant medical records, any documents obtained from parties in making the adverse determination, and any other documents and/or written information submitted in support of the appeal.

The case was reviewed by a physician who is Board Certified in Neurological Surgery, and who has met the requirements for the TWCC Approved Doctor List or who has been granted an exception from the ADL. He or she has signed a certification statement attesting that no known conflicts of interest exist between him or her and any of the treating physicians or providers, or any of the physicians or providers who reviewed the case for a determination prior to referral to \_\_\_ for independent review. In addition, the certification statement further attests that the review was performed without bias for or against the carrier, medical provider, or any other party to this case.

The determination of the \_\_\_ reviewer who reviewed this case, based on the medical records provided, is as follows:

History

The patient is a 63-year-old female who "injured her back" in \_\_\_. She developed neck and shoulder pain, and pain to the hands with numbness. Carpal tunnel syndrome was diagnosed. Release of the right carpal tunnel was performed in 1992, and of the left in 1993. The patient had right shoulder surgery in 1999. In March 2003 she had ulnar nerve surgery. The patient has continued discomfort in the neck and into the shoulders and arms.

An EMG on 4/8/02 showed bilateral C7 and left C6 radiculopathies. A CT myelogram on 10/7/02 showed multiple levels of chronic change and potential nerve root compression. X-rays demonstrated four levels of potential instability.

Requested Service(s)

Cervical Discogram with CT scan

Decision

I disagree with the carrier's decision to deny the requested discogram and CT scan.

Rationale

There is no study that indicates a definite level of trouble that would explain the patient's symptoms. There are four levels of potential difficulty including some instability. To find one of those levels responsible for the patient's discomfort by way of discography may be helpful in coming to surgically therapeutic conclusions.

This medical necessity decision by an Independent Review Organization is deemed to be a Commission decision and order.
