

NOTICE OF INDEPENDENT REVIEW DECISION

June 17, 2004

RE: MDR Tracking #: M2-04-1311-01
IRO Certificate #: 4326

The ___ has been certified by the Texas Department of Insurance (TDI) as an independent review organization (IRO). The Texas Workers' Compensation Commission (TWCC) has assigned the above referenced case to ___ for independent review in accordance with TWCC Rule §133.308 which allows for medical dispute resolution by an IRO.

___ has performed an independent review of the proposed care to determine if the adverse determination was appropriate. In performing this review, relevant medical records, any documents utilized by the parties referenced above in making the adverse determination and any documentation and written information submitted in support of the appeal was reviewed.

The independent review was performed by a ___ physician reviewer who is board certified in Neurological Surgery, by the American Board of Neurological Surgery, Inc. licensed by the Texas State Board of Medical Examiners (TSBME) in 1986, and who provides health care to injured workers. This is the same specialty as the treating physician. The ___ physician reviewer has signed a certification statement stating that no known conflicts of interest exist between him or her and any of the treating physicians or providers or any of the physicians or providers who reviewed the case for a determination prior to the referral to ___ for independent review. In addition, the reviewer has certified that the review was performed without bias for or against any party to this case.

Clinical History

This patient sustained a work-related injury on ___ when he was stacking boxes and cat litter bags for ___. He experienced stabbing pain to his mid back and required emergency room treatment. The patient was being treated at a pain center and an MRI of the thoracic spine performed on 06/04/02 revealed deformity of the anterior superior end plate of L1. The original MRI was a technically poor scan and the physician has requested a repeat MRI of the thoracic spine without contrast.

Requested Service(s)

MRI of the thoracic spine without contrast

Decision

It is determined that the proposed MRI of the thoracic spine without contrast is medically necessary to treat this patient's condition.

Rationale/Basis for Decision

The request for a repeat thoracic MRI is reasonable and medically necessary for the treatment of this patient's work-related injury. The patient continues to have ongoing symptoms in the thoracic region and the documentation indicates that the prior MRI is over two years old and of extreme low resolution.

This decision by the IRO is deemed to be a TWCC decision and order.
