RE: Injured Worker:
MDR Tracking #: M2-05-0397-01
IRO Certificate #: IRO4326

The Texas Medical Foundation (TMF) has been certified by the Texas Department of Insurance (TDI) as an independent review organization (IRO). The Texas Workers' Compensation Commission (TWCC) has assigned the above referenced case to TMF for independent review in accordance with TWCC Rule §133.308 which allows for medical dispute resolution by an IRO.

TMF has performed an independent review of the proposed care to determine if the adverse determination was appropriate. In performing this review, relevant medical records, any documents utilized by the parties referenced above in making the adverse determination, and any documentation and written information submitted in support of the appeal was reviewed.

The independent review was performed by a TMF physician reviewer who is board certified in orthopedic surgery, by the American Board of Orthopaedic Surgery, licensed by the Texas State Board of Medical Examiners (TSBME) in 1969, and who provides health care to injured workers. This is the same specialty as the treating physician. The TMF physician reviewer has signed a certification statement stating that no known conflicts of interest exist between him or her and any of the treating physicians or providers or any of the physicians or providers who reviewed the case for a determination prior to the referral to TMF for independent review. In addition, the reviewer has certified that the review was performed without bias for or against any party to this case.

Requested Service(s)

Proposed ambulatory surgical care center for arthrogram distal clavicle excision left shoulder, wrist debridement to right wrist, and pain pump insertion to left shoulder

Decision

It is determined that there is no medical necessity for the proposed ambulatory surgical care center for arthrogram distal clavicle excision left shoulder, wrist debridement to right wrist, and pain pump insertion to left shoulder to treat this patient's medical condition.

Rationale/Basis for Decision

Medical record documentation does not indicate the necessity for the proposed surgeries. This patient has already undergone numerous surgeries without the expected pain relief and even local injections provided

only a 50% relief of pain. Medical record documentation does not indicate the proposed surgeries would provide a reasonable expectation of pain relief. Therefore, the proposed ambulatory surgical care center for arthrogram distal clavicle excision left shoulder, wrist debridement to right wrist, and pain pump insertion to left shoulder is not medically necessary to treat this patient's medical condition.

This decision by the IRO is deemed to be a TWCC decision and order.
