Questions for Review

Medical necessity of 30 sessions of chronic pain management

Determination

PHMO, Inc. has performed an independent review of the proposed care to determine if the adverse determination was appropriate. After review of all medical records received from both parties involved, the PHMO, Inc. physician reviewer has determined to **overturn the denial** on the requested service(s).

Summary of Clinical History

The claimant was injured as a result of a work related injury. The claimant was injured while packing cotton bales. While doing this, one fell on her and this caused her to fall and suffer injury. Since that time period the claimant has participated in various consultations and diagnostics.

Clinical Rationale

The claimant meets virtually every category in regards to being a candidate for a chronic pain management program. The patient is on medication for control of symptoms, has a GAF of 60, failure to respond to past conservative care, involves a documented mental and emotional component and has physical and vocational issues. There was also a brief demonstration that the claimant would and will adjust well to the program by a trial period thus demonstrating that in all probability the program will render some effectiveness. Medical necessity has been established, authorization should be administered.
