Questions for Review

Medical necessity of Lumbar myelogram w/CT

Determination

PHMO, Inc. has performed an independent review of the proposed care to determine if the adverse determination was appropriate. After review of all medical records received from both parties involved, the PHMO, Inc. physician reviewer has determined to **uphold the denial** on the requested service(s).

Summary of Clinical History

The patient sustained a work related job injury on ____, while employed with the City of Whitesboro.

Clinical Rationale

The patient has had pain for two years without any significant improvement. He has been examined by multiple physicians, many who believe that the patient has had adequate treatment and workup. The question has to do with the adequacy of the MRI. The MRI was interpreted as normal. There was no suggestion that there might be unexplained pathology. A CT/myelogram is indicated when there are

unexplained findings on an MRI or inadequately explained findings, or for whatever reason, an MRI is not contraindicated. None of these apply. The patient had electro diagnostic studies which were interpreted to be abnormal involving the femoral nerve as well as the sural sensory nerve and neuropathy of L4-S1. This would tend to involve global aspect of the patient's lumbar spine, if indeed the lumbar spine were the source of pathology. A consult with a neurologist would be more appropriate.
