The findings of the independent review are as follows:

Questions for Review

Medical necessity of proposed arthroscopy, ankle (tibiotalar and fibulotalar joints) surgical; debridement, limited

Determination

PHMO, Inc. has performed an independent review of the proposed care to determine if the adverse determination was appropriate. After review of all medical records received from both parties involved, the PHMO, Inc. physician reviewer has determined to overturn **the denial** on the requested service(s).

Summary of Clinical History

Mr. ____ sustained a work related on the job injury on ____, while employed with ____.

Clinical Rationale

The denial is overturned. According to the rationale of the initial denial based on ACOEM guidelines and upon the post appeal review dated 10.26.2006 which the carrier has relied upon to support its denial, the patient should have exhausted conservative care including steroid injections. He has had this course of treatment.

Additionally, the surgeon and patient have now been able to locate a pain in association with a suture anchor as well as the anterior meniscal lesion. They have in fact followed the guidelines and the patient now has retained symptomatic hardware and removal is indicated as well as having treated the "meniscal

lesion" non-operatively with failure to resolve the problem non-operatively, having followed the guideline recommendations.

Clinical Criteria, Utilization Guidelines or other material referenced

This conclusion is supported by the reviewers' clinical experience with over 10 years of patient care.

The reviewer for this case is a Medical Doctor licensed by the Texas State Board of Medical Examiners. The reviewer is a diplomate of the American Board of Orthopedic Surgery, and is engaged in the full time practice of medicine.

In accordance with the act and the rules, the review is listed on the DWC's list of approved providers or has a temporary exemption. The review includes the determination and the clinical rationale to support the determination. Specific utilization review criteria or other treatment guidelines used in this review are referenced.

The reviewer signed a certification attesting that no known conflicts-of-interest exist between the reviewer and the treating and/or referring provider, the injured employee, the injured employee's employer, the injured employee's insurance carrier, the utilization review agent, or any of the treating doctors or insurance carrier health care providers who reviewed the case for decision before referral to the IRO. The reviewer also attests that the review was performed without any bias for or against the patient, carrier, or other parties associated with this case.
