

COMMUNITY INVESTMENT REPORT

A Summary of Select Texas Investments

by Mutual and Stock Life and Health

Insurance Companies in 2011

**Compiled by
Texas Department of Insurance
November 2012**

Community Investment Report

Texas Insurance Code §425.107,¹ requires the Department of Insurance to report on Texas community investments by life, health, and accident companies doing business in Texas. The criteria for investments and data submission were determined after consultation with the Office of Public Insurance Counsel and the industry. The resulting report is made available to the Texas Legislature and the public in even-numbered years. The methodology used to gather and analyze the investment information as well as more detailed data summaries, are included in the sections following the Executive Summary.

Executive Summary

Texas life and health insurance companies with Texas premiums of \$10 million or more reported Texas investments of \$68 billion, which represents 2.2% of the \$3 trillion of the total invested assets held by the companies in 2011. Premium for the 242 companies required to provide investment data accounted for more than 98 percent of the total \$53 billion of Texas life and annuity premiums collected in calendar year 2011. Because some groups included companies with premium below \$10 million, investment totals include reported figures from 253 companies.

Ninety-four percent of reported investments were in political subdivision/public utility bonds, commercial and farm mortgages, real estate and corporate bonds.² The \$26.1 billion of commercial and farm mortgage investments reported by 146 of the companies represented the largest category of investments. Although companies were not required to report corporate bond investments, this was the second-largest category with 66 companies reporting investments totaling more than \$21.5 billion. Political subdivision/public utility bonds investments was the next largest category of reported investments with 187 companies reporting investments of \$13.7 billion.

The statute does not require insurers to identify investments by geographic location (other than at the state level) or those targeting disadvantaged areas or populations. Because of Legislative interest in investments in disadvantaged areas, however, insurers were given the option of providing that information if available. It should be noted that disadvantaged areas are usually identified at the ZIP code level, while investments are frequently identified at a larger geographic base, such as city, county, state, or national level. For that reason, not all investments can be linked to specific ZIP codes. Consequently, investments identified as benefiting economically

¹ See Attachment 1.

² The Community Investment Report survey had mandatory and optional reporting sections. Real estate, commercial and residential mortgages, and political subdivision/public utility investments were mandatory. As not all insurers elected to report optional categories (investments via federal agencies such as FHA, Texas corporate bonds, Texas stocks, deposits in financial institutions, and other investments/ contributions), the investment totals do not include all Texas investments.

disadvantaged areas are not comprehensive. Companies did link almost \$1.3 billion of the \$68 billion investment total to economically disadvantaged areas.

Commercial and farm mortgages dominated the identified investments in economically disadvantaged regions with more than 980 million, accounting for 76 percent of all investments identified as being in disadvantaged regions. The second-highest category of identified investments in disadvantaged regions was \$125 million in real estate investments.

Pooled investments, such as commercial and farm mortgage obligations, are usually based on shared investment characteristics rather than geographic area. Consequently, funds going to some Texas commercial and farm mortgages may not have been identifiable and are not included in either the Texas investment totals or investment totals for economically disadvantaged areas. The same caveat would apply to residential mortgage pools such as Fannie Mae.

Companies Required to Report

All foreign and domestic life and health insurers with \$10 million or more premium volume were required to report. In 2011, Texas life and health insurers with an annual premium of \$10 million or more accounted for more than 98 percent of the total Texas life and health premium volume in Texas. As Texas statutes limit investment flexibility for certain types of insurers that typically have relatively small premium volume, inclusion of smaller insurers would have increased the reporting burden for smaller companies without significantly affecting the comprehensiveness of the investment data included in this report. Consequently, insurers with less than \$10 million were not required to report.

The investment survey was sent to 242 companies on August 22, 2012. A higher response rate (253 companies) resulted because some groups included affiliated companies with less than \$10 million in Texas premium in their submissions.

Investments Included

The survey consisted of two sections: a mandatory reporting section and an optional reporting section. Investments more readily linked to geographic locations -- real estate, residential mortgages, commercial and farm mortgages, and political subdivision/public utility bonds -- were in the mandatory section. Companies were also given the option of reporting other Texas-specific investments. The optional section included corporate stocks and bonds, deposits in financial institutions, Texas investments via U.S. agencies and a general category for other types of investments, including donations to Texas charities or nonprofit organizations. Texas investments were defined as:

- Property located in Texas (real estate and mortgages);³
- Bonds for Texas political subdivisions (state and local governments and school districts) and public utility projects in Texas;
- Investments in businesses with a Texas incorporation or principal place of business (stocks and bonds);
- Deposits in Texas financial institutions;
- Other investments and contributions to Texas organizations.

While the statute does not require insurers to identify investments targeting economically disadvantaged areas or populations, there is legislative interest in this topic. Consequently, the survey provided insurers the opportunity to identify investments targeting disadvantaged areas or populations when possible. It should be noted that disadvantaged areas are usually identified at the ZIP code level, while investments are frequently identified at a larger geographic-base such as city,

³ Companies were also given the opportunity to report investment pools such as Commercial Mortgage Obligations and residential mortgage programs such as Fannie Mae. Since investors generally have no information on the individual investments within these pools, it can be assumed that investments reaching Texas via investment pools are under-reported.

county, state, or national level. For that reason, not all investments can be linked to specific ZIP codes. Consequently, total reported investments identified as benefiting economically disadvantaged areas are not comprehensive.

Limitations on Investment Information

An individual insurer's record-keeping system and investment types can limit its ability to link an individual investment to economically disadvantaged areas or populations. Therefore, insurers were given space to include ZIP codes on each investment listed, but were not required to do so. While this gave insurers the opportunity to report investments in economically disadvantaged areas, limitations on companies' ability to identify investment areas means the total investments in economically disadvantaged areas should not be considered comprehensive.

Criteria used for identifying an area as economically disadvantaged were:

- Any Texas ZIP code with a 2000 Census median household income of less than 75 percent of the county median income but not more than 75 percent of the state median income ($\$39,927 \times 75\% = \$29,945$), or
- Any ZIP code with a median income of less than 50 percent of the state median income ($\$39,927 \times 50\% = \$19,964$)⁴.

⁴ See Attachment II for a list of the ZIP codes meeting the economically disadvantaged criteria.

Reported Investments

Table 1 shows the total reported investments and reported investments in economically disadvantaged areas for the four mandatory investment categories and five optional investment categories. The comprehensiveness of this data varies by investment type since some investments, such as mortgages, are more readily linked to geographic locations than others.

**Table 1
Texas Investments**

Reporting Categories	Total Texas Investments	Economically Disadvantaged Areas	
		Investments	Percent of Total Investments
Mandatory			
Real Estate	\$2,742,684,158	\$125,415,308	9.74%
Commercial and Farm Mortgages	\$26,186,079,846	\$980,330,799	76.16%
Residential Mortgages	\$170,026,598	\$438,034	0.03%

Texas Insurance Code

§425.107 Authorized Investments and Loans for Capital Stock Domestic Life, Health and Accident Insurance Companies

Community Investment Report

- (a) The department shall, after consulting with the insurance industry of this state and the office of public insurance counsel, develop a report of insurance industry community investments in this state.
- (b) The commissioner may request, and an insurance company shall provide, information necessary to complete the report required by this section.
- (c) The department shall provide the report required by this section to the legislature not later than December 1 of each even-numbered year.
