DESCRIPTION OF THE SERVICE OR SERVICES IN DISPUTE:

X

A DESCRIPTION OF THE QUALIFICATIONS FOR EACH PHYSICIAN OR OTHER HEALTH CARE PROVIDER WHO REVIEWED THE DECISION:

X

REVIEW OUTCOME:

Upon independent review, the reviewer finds that the previous adverse determination/adverse determinations should be:

X

Provide a description of the review outcome that clearly states whether medical necessity exists for <u>each</u> of the health care services in dispute.

PATIENT CLINICAL HISTORY [SUMMARY]:

A X revealed a X. There was a X at the X. X, M.D. examined the patient at X. X and X and X. X was put on hold and X was referred to an X. Dr. X examined the patient on X. X was injured on X when X was X. It was noted X sustained a X also. X had had X and X. X had X. X MRI was X. X was noted to X. X was X. X was X. The area of X and X. There was X noted and there was X. The X and X. Dr. X indicated that also of note was X. It was noted a X was X. It was noted X was X. A X. and X. An X. was also recommended. Based on the X, the X. preauthorization request forms noted the X. On X provided a non-authorization. The patient then followed-up with Dr. X. It was noted X was X had been denied. It was also noted X was X. X. exam was X was discussed. It was noted the reviewer wanted more X, despite Dr. X noting the patient had done so. The X was again requested, which X. As of X, Dr. X noted the X denial was based on the need for X, which Dr. X disagreed with. X noted a X was X because X did have a X and X, it had been shown it did not change the natural history of X. X was continued, and it was noted this would be sent for an IRO.

ANALYSIS AND EXPLANATION OF THE DECISION INCLUDE CLINICAL BASIS, FINDINGS, AND CONCLUSIONS USED TO SUPPORT THE DECISION:

The patient is a X who X. An MRI scan of the X. The patient was subsequently evaluated by Dr. X and was documented to have X. The patient was noted to have X. A X was X. It was reported that X underwent X. It should be noted the patient is a X. The initial request was non-certified by X, M.D. on X. X non-certification was upheld on X, M.D. on X. Both reviewers attempted peer-to-peer without success and cited the evidence based <u>Official Disability Guidelines</u> (<u>ODG</u>) as the basis of their opinions.

The <u>ODG</u> does not recommend X as an X. It is X. X combined with X. There should be X at X. The X findings should X. The patient should have X. Additionally, X. X is recommended for X. It is indicated for patient who had X for at X. X of a X is recommended after X. X is generally adequate. X may be required with X. Also, pain should be documented with X. X may be present during X. X should be X, as well as X. Criteria for X. It should be noted that if the X is not indicated, the request for X would, likewise, not be indicated. The <u>ODG</u> does not recommend the use of a X. These X have not been shown to be any better X.

The requested X does not meet the <u>ODG</u> criteria, as outlined above. The patient appears to have an X. Dr. X reported X. In addition, the MRI scan documented a X, in contrast to what Dr. X has reported. Therefore, the requested X are not medically necessary, appropriate, or supported by the evidence-based <u>ODG</u> and the previous adverse determinations should be upheld at this time.
